

AI-Powered Career Readiness Infrastructure

Partnership Proposal for the AUC Career Center

Prepared for
Maha El Moslemany
Senior Director, Career Center

Prepared by
Ziad Emad
Founder & CEO, ZEDX AI

ZEDX AI <> AUC Career Center
October 5, 2026

Confidential partnership discussion • Pilot-first proposal

1. Executive Summary

ZEDX AI is a voice-to-voice mock interview platform designed to give students realistic, repeatable interview practice before they meet real recruiters. Students practice against an AI interviewer that listens to spoken answers, adapts follow-up questions to the conversation, and produces structured performance feedback.

For AUC, the opportunity is not to replace human career coaching. It is to add an always-available practice layer around the Career Center's existing mock interviews, workshops, employer interactions and recruitment activities. Students can rehearse repeatedly before a high-value human session while the Career Center gains measurable insight into common preparation gaps.

2. Why ZEDX Fits the AUC Career Center

AUC already provides	ZEDX adds
Professional mock interviews and advisor-led practice	Unlimited AI practice between human sessions
Interview preparation and career-readiness workshops	Always-on simulation students can use immediately after a workshop
Campus interviewing and recruitment activity	Role-specific rehearsal using a CV and target Job Description
Employer and professional interactions	A safe environment to repeat difficult questions before the real interaction

Positioning: ZEDX is an extension of the Career Center's capacity—not a replacement for advisors, professionals, or employer-led interviews.

3. The Opportunity

- Practice frequency: Human mock interviews are high-value but naturally limited by advisor and professional availability.
- Personalization: Students need practice that reflects their own CV, target role and experience level—not only generic question banks.
- Interview pressure: Repeated spoken practice helps students rehearse answers, follow-ups, pacing and camera presence before a real interview.
- Measurement: Repeated practice becomes more valuable when students can see scores, recurring weaknesses and progress over time.

4. The ZEDX AI Experience

STEP	STAGE	WHAT HAPPENS
01	Context	Student provides a CV and target Job Description.
02	Interview	ZEDX conducts a voice-to-voice interview rather than a text-only chat.
03	Adaptation	Follow-up questions are generated from the student's actual answers and role context.
04	Evaluation	The session produces structured feedback across relevant interview dimensions.
05	Improvement	Students repeat the process and compare performance over time.

Core experience: 29+ supported languages • Voice-to-voice interaction • CV + JD personalization • Conversation-aware follow-ups

5. Platform Capabilities

CAPABILITY	WHAT IT ENABLES
Voice-to-Voice Interviewer	Natural spoken interaction: the AI asks questions aloud, listens to answers and responds conversationally.
CV & Job Description Personalization	Interview questions are grounded in the candidate's background and target role.
Technical + Behavioral Modes	Practice can cover technical depth, behavioral questions, leadership, situational judgment and role-specific scenarios.
Dynamic Follow-up Questions	The interviewer can probe an answer instead of simply moving through a fixed list.
Multi-Language Practice	Voice interviews are available across 29+ supported languages.
Video Interview Environment	Camera-enabled practice helps students rehearse the visual and psychological aspects of virtual interviews.
Session Review	Students can review transcripts, feedback and scorecards to identify repeat weaknesses.
Institutional Analytics	Aggregated insights can help the Career Center identify recurring skills gaps and target workshops accordingly.

Human + AI model: Human professionals remain the high-value evaluators and mentors. ZEDX absorbs repetitive practice volume so students can arrive more prepared.

6. Student & Institutional Impact

FOR STUDENTS	FOR THE CAREER CENTER
Practice privately before high-stakes interviews	Scale practice access without scaling appointment slots
Receive structured feedback after every session	Identify recurring skills gaps across cohorts
Practice difficult follow-ups repeatedly	Use aggregated insights to shape targeted workshops
Track improvement over multiple sessions	Support recruitment periods with an always-available practice layer

7. Performance & Engineering

SUBSYSTEM	OBSERVED / DESIGNED	OPERATIONAL VALUE
STT processing	Near-real-time	Keeps voice practice fluid
VAD audio pipeline	~85% payload reduction in internal measurements	Reduces unnecessary audio transmission
LLM streaming	~120 ms TTFT under optimized network conditions	Fast conversational response
UI rendering	Stable streaming render	Incremental feedback without waiting for a full response
Scalability	Designed for institutional-scale concurrent usage	Supports deployment beyond one-to-one advisor capacity

Benchmarks are engineering observations under stated test/network conditions; production performance varies with network, model and provider conditions.

11. Proposed Implementation Path

STEP	STAGE	ACTION
01	Pilot approval	Agree on cohort, duration, success criteria and responsible contacts.
02	Technical setup	Configure access, branding, onboarding and required integration points.
03	Student launch	Activate 50-100 students and provide a short onboarding guide.
04	Measure	Track usage, interview scores, recurring gaps, feedback and reliability.
05	Review	Present the pilot report and agree on a scaled deployment model if results meet expectations.

8. AUC Proof-of-Value Pilot

Rather than asking AUC to commit to a full deployment immediately, ZEDX proposes a measurable, zero-cost pilot designed to answer one question: Does repeated AI interview practice create enough student value to justify institutional deployment?

PILOT ELEMENT	PROPOSAL
Participants	50-100 selected AUC students across multiple disciplines
Duration	30 days
Access	Unlimited mock interview practice during the pilot
Experience	Voice-to-voice AI interviewer with CV/JD personalization
Branding	AUC-branded or co-branded pilot experience, subject to technical agreement
Student outputs	Interview scorecards, feedback and session review
Institutional outputs	Pilot engagement + performance report and recommendations
Investment	\$0 — fully sponsored by ZEDX AI

Pilot success criteria

- Student activation and interview completion rate
- Average sessions per active student
- Average interview score and recurring weak areas
- Improvement between early and later sessions
- Student satisfaction and qualitative feedback
- Operational reliability and support performance

9. Commercial Terms — AUC Academic

ZEDX proposes a dedicated academic pricing model for AUC: \$2 per student per month with unlimited mock interview sessions during the active subscription period.

STUDENTS	ILLUSTRATIVE PRACTICE VOLUME*	COMPARABLE SESSION COST	AUC MONTHLY COST	ILLUSTRATIVE SAVINGS
500	15,000 sessions	\$15,000	\$1,000	\$14,000 (93.3%)
1,000	30,000 sessions	\$30,000	\$2,000	\$28,000 (93.3%)
2,500	75,000 sessions	\$75,000	\$5,000	\$70,000 (93.3%)
5,000	150,000 sessions	\$150,000	\$10,000	\$140,000 (93.3%)

*Illustrative comparison assumes 30 sessions per student per month at a \$1/session reference rate. This is a benchmark for value illustration, not a claim about AUC's current procurement costs.

Why the model is attractive to AUC: predictable budgeting, unlimited practice for participating students, and no penalty for higher engagement.

10. Service, Privacy & Institutional Readiness

- Support: Dedicated technical support with a proposed 24-hour target for critical technical issues during the partnership.

costs, if any, are agreed separately.

- Data isolation: ZEDX's backend uses Supabase/PostgreSQL with Row Level Security to restrict records to authorized users.
- Controlled access: University authentication / SSO can be scoped as part of institutional deployment requirements.
- Student privacy: Interview transcripts, CVs and session data should be governed by an agreed institutional data-retention and access policy.

ZEDX AI. Practice the interview, not just the answers.
